FUGITIVE EMISSIONS OPERATOR TRAINING

Course #395

This course presents background and field procedures for conducting fugitive emissions monitoring at refineries, marketing terminals, and oil and gas production facilities. The emphasis is on understanding and following uniform and consistent methods based on guidelines approved by state and local air quality agencies. The use of VOC leak data to develop facility emissions inventories will also be discussed. Successful completion of this course will satisfy *one* of the requirements for operator certification at air pollution control districts that require such certification.

**May 18, 2006
8:00 am - 12:00 pm
South Coast Air Quality Management District
21865 East Copley Drive
Diamond Bar, California**
